BRITISH AIDS TO FRANCE.

Army Must Play Its Part.

VALUE OF EARLY ASSURANCE.

BY THE RT. HON. ANTHONY EDEN, M.P.

Victor Nason, for Foreign Affairs

(Cable summary reports that Mr. Chamberlain's recent declaration of support for France in the event of need has given rise to comment, especially in the House of Commons concerning the last minute steps taken by the British Government to protect and ensure the safety of British subjects in French territory. (Eden's declaration, however, which was made last night, stated that Britain would not be able to offer much help even if it were capable of doing so.) Mr. Eden, in this article, argues that Britain should be able to give more help and more support to France.)

Inflated prices of French bread have continued to rise in the last days, and the French Government has been compelled to issue new regulations to the effect that bakers shall not increase the price of bread above 70 cts. per bag of flour.

Another of Eden's views is that the British Government should take a more active part in the event of a war.

OIL RIPELLANT TO THE EAST.

The oil market continues to be active, and the price of oil is rising.

New Zealand is now producing a large quantity of oil, and the country is expected to export a large portion of its production.

The oil market is now in a state of flux, and the price of oil is expected to rise further in the near future.

The oil market is currently being supplied by a large number of producers, and the price of oil is expected to remain high for some time to come.

The oil market is currently in a state of flux, and the price of oil is expected to rise further in the near future.
