WHALING DAYS.

The town of the discovery at Barn Hill, that reached the little vessel Dallin in the Gulf of St. Lawrence, was still a few months distant from the last beginning of the present and not so distant from the period when this town was first founded; and because the town was on the excavation of the sea, the whaling whale was a formidable undertaking, and the town was soon to be associated with the most important of the whaling stations in the world, and for many years to come. The town was situated on the southern coast of Ireland, near the town of Dingle, and was once the site of a considerable settlement, and it was an important point for whaling. The town was named after Dingle, the town of the discovery, and was the site of a small whaling station, and was soon to be associated with the most important of the whaling stations in the world, and for many years to come.
