Famous Stamp Collections.

Mr. Fred. J. McVicker, the president of the London Philatelic Society, in his newly issued "A.C.G. of Stamp Collecting," gives an account of chief collections of stamps in the world. He states that the stamp collecting movement has spread throughout the British Empire and this is well shown by the list of the "prize" collections, which are all of the Imperial letter. The lists of stamps are great. In particular the British Empire is rich in stamps, as are the United States and France. The British Empire has the advantage of having a large number of colonies, and the stamps of these colonies are well represented in the prize collections.

One of the most interesting of these collections is the "British Empire Collection," which is owned by Mr. F. J. McVicker, and is on view in the British Museum. The collection consists of over one million stamps, and is well known for its completeness. It includes stamps from all parts of the British Empire, and is especially strong in Australian stamps. The collection is arranged in alphabetical order, and is well worth a visit to the British Museum.

Food and Health.

Although small in stature, the Japanese are physically strong and of a well-proportioned build. This is attributed to their mode of living. They go to sleep early and rise early, and are careful with their health. They eat a diet that is rich in vegetables, and are careful with their diet. The Japanese are a very healthy people, and their life expectancy is high.

The Mount Boggy Field and the Township of Cambengo.

In the information pages on pages 30, 21, and 22, "Boggy Mountain" is the main topic of discussion. It is a low-lying, rolling, and yet very fertile area. The mountain is covered with a mixture of forest and grassland.

The Mount Boggy Field is a small "limited" area. In 1878 it was assigned to the Spanish Army Medical Service, and is now under the care of the Spanish Army Medical Service. The Mount Boggy Field is a small "limited" area.
